Caution

SWITCHING FROM [XS8] TO [SL16]

You can easily change the system control mode with the following operation. Do this operation after completing all connections.

Switching to [SL16] : Hold down the AUTO key and switch the MAIN POWER key from OFF to ON.

Switching back to [XS8] : Hold down the BAND key and switch the MAIN POWER key from OFF to ON.

- This operation will not affect items stored in the memory.

Note : The system control mode will revert to [XS8] if the unit is not turned on for three consecutive days. If you would like to make the unit completely (and permanently) [SL16] compatible, please consult your nearest retailer or the Kenwood Marketing Department.

- There is the U-Com (hard) match method.

KR-A2080/A3080/A4080/A5080

DISASSEMBLY FOR REPAIR

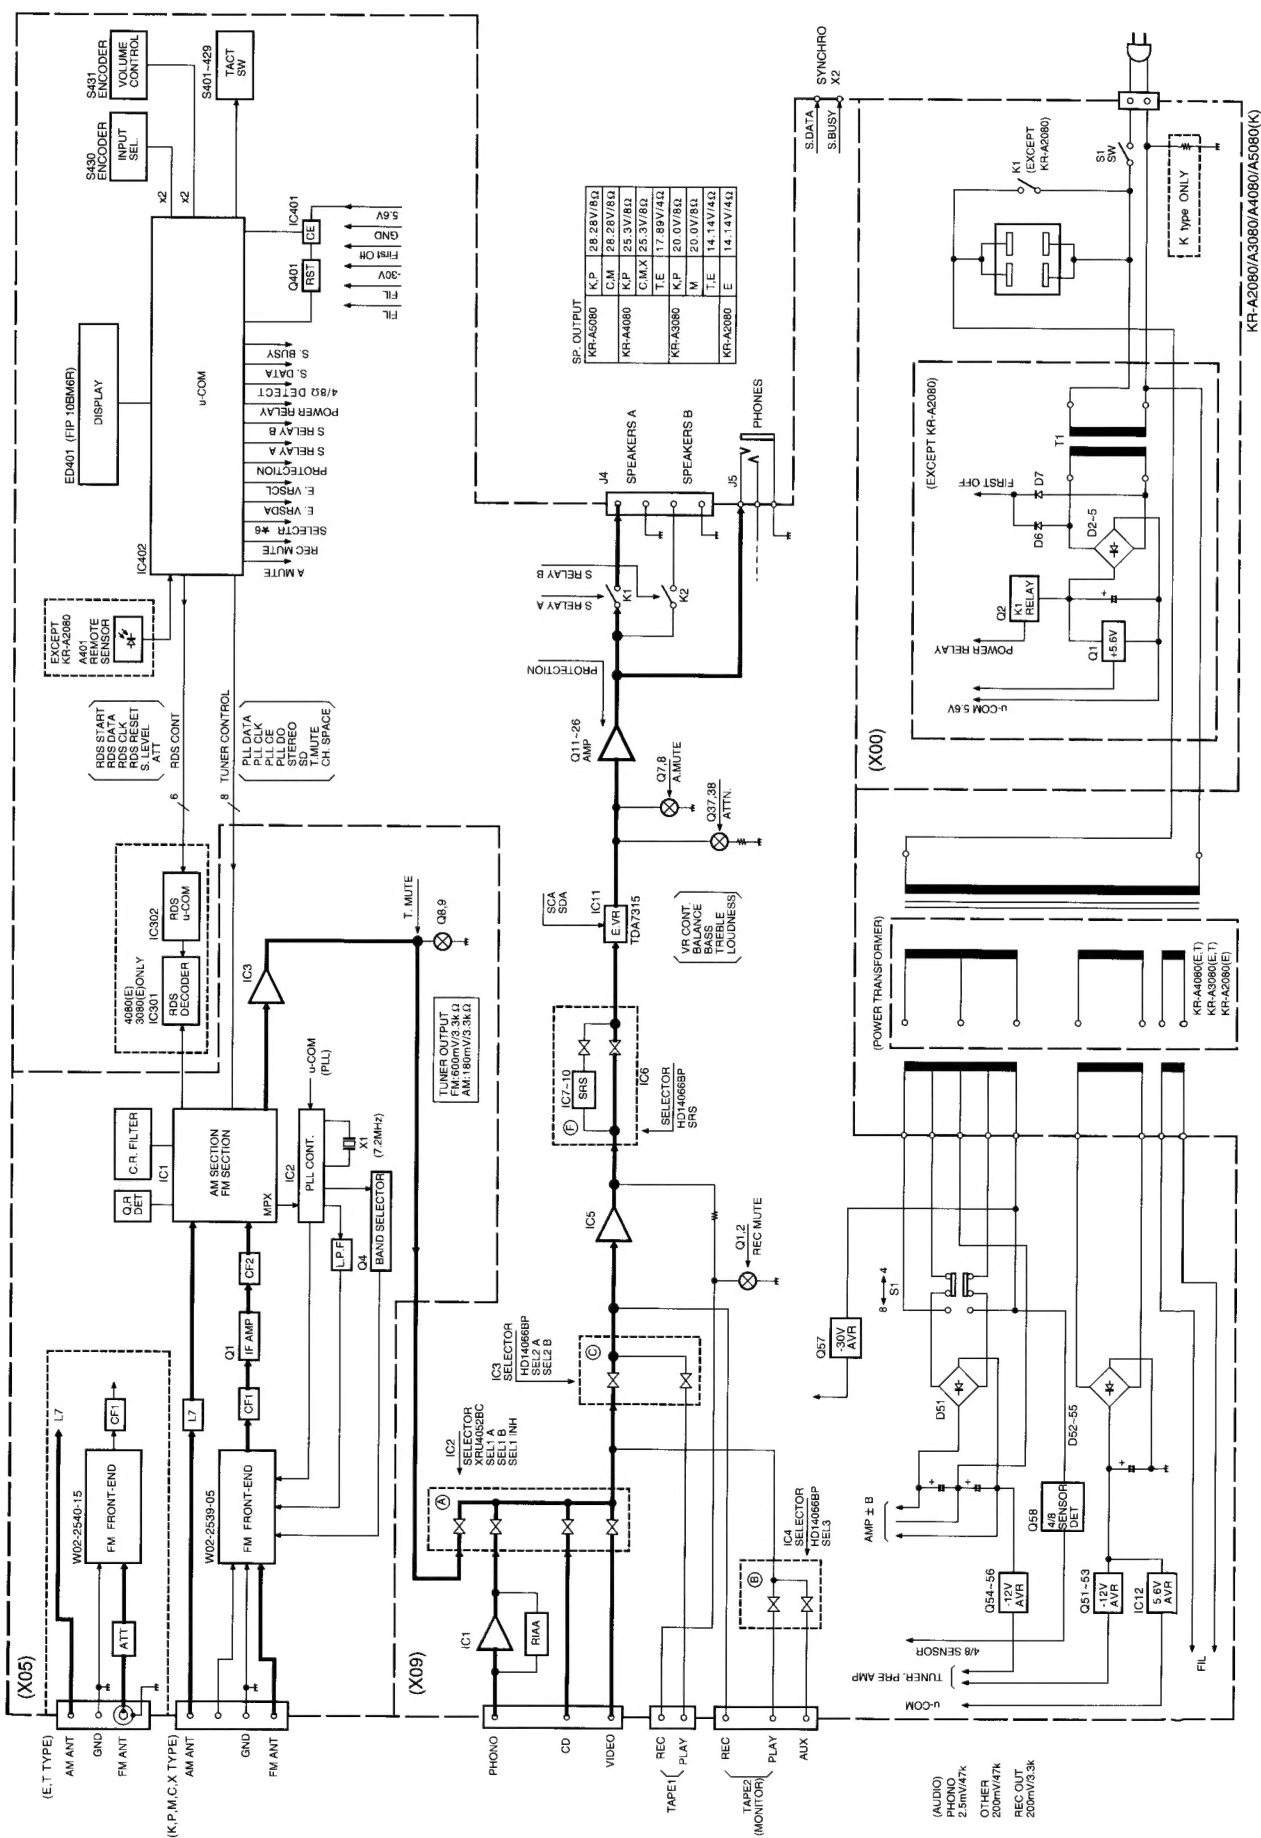

- 1) Remove the 4 screws (❶), then remove the front panel.

- 2) Remove the power knob (❷) and the 14 screws (❸).
- 3) Put the doth (❹) on the power transformer, then remove main PCB and rear panel assembly (❺).

50 TYPE2	50	L	H	L	H

1-8. XS8/SL16 System changeover

Implements an additional operation by the system operated by XS8 to SL16.

1-8-1. SL16

Easy operation one way amplifier and receiver. Other source devices are compatible with one-way and two-way easy operation. Operation is 16-bit. Operation is two way and compatible with operating mode display. Also, adding MD and LD to input selector makes it compatible with easy operation. Apart from TUNER, source devices are operating mode display compatible and input selector MD and LD compatible. Since it is not possible for the amplifier and receiver to be always compatible with operating mode displays, they are only input selector MD and LD compatible and SL16 compatible.

1-8-2. Addition of a selector source

Adding a system operation adds selector sources MD and LD and controls MD and LD system operation.

(1) Selector source switching

MD and LD are switched as TAPE/TAPE1 and VIDEO background modes separately from the normal selector functions.

- Switch the selector source by holding down the AUTO panel key for at least two seconds.

TAPE/TAPE1 → MD

VIDEO → LD

(If another key is entered while the key is being entered, the key input is set to off and the key is made ineffective.)
When a MD or LD is used, the MD is connected to the RCA Pin of TAPE and the LD to the RCA Pin/Video Input of VIDEO.

- The operation of the system controls only the currently selected source and has no control whatsoever over the operation of the side which is not selected. For example, while MD is selected, even if the "Deck B Play" serial code is received, MD will remain selected without switching from MD to TAPE/TAPE1.

(2) Settings during microprocessor backup or initialization

- During microprocessor initialization the selector is set to TAPE/TAPE1 and VIDEO. The current selector mode (TAPE or TAPE1/MD and VIDEO/LD) is maintained except when the backup is disrupted.

(3) Other items be noted

- This selector switching function has been developed in accordance with new serial codes. Therefore, if XS8 is used, since there is no code for MD and LD, the selector source function will not work if the 8/16-bit serial mode is 8-bit. It works only in 16-bit mode.
Also, if serial mode has been switched from 16-bit to 8-bit when MD and LD are being selected, it will force a switch to TAPE/TAPE1 and VIDEO.

1-8-3. U-COM(hard) match method : diode matrix

	53 KR3
69 KS0	0 : XS8 1 : SL16

0 : Non Diode 1 : Exist Diode

1-10. Contents of backup data to be held

--- AMP ---

- POWER STANDBY ON/OFF
- SELECTOR mode
- TAPE 1/MD condition
- VIDEO/LD condition
- TAPE 2 ON/OFF
- SPEAKER A RELAY ON/OFF
- SPEAKER B RELAY ON/OFF
- VOLUME LEVEL
- AUDIO LEVEL mode
- BALANCE LEVEL
- BASS LEVEL
- TREBLE LEVEL
- LOUDNESS ON/OFF
- SRS 3D ON/OFF

--- TUNER ---

- LAST BAND
- PRESET CHANNEL FREQUENCY
- LAST FREQUENCY (FM/AM)
- PRESET MEMORY (1ch ~ 40ch)
- AUTO/MANUAL mode

The initial setting is performed in a following event:

1. When backup memory data is destroyed when reset is applied to the microprocessor.
2. While pressing the MEMORY key, then turn on power and turn off power.

CIRCUIT DESCRIPTION

2. TEST MODE

2-1. TEST MODE OF MAIN UNIT

(1) Setting the test mode

The main unit is put into the test mode when the AC power is turned ON while pressing the "TUNING DOWN" key. The following state is obtained when the test mode of the main unit is set.

- The power is turned ON automatically.
- All the fluorescent display indicators and LEDs light.
(The all-illuminated state is cleared by pressing any main unit key.)
- The backup state except when the power is turned ON and OFF is initialized.

(2) Canceling the test mode

Turn OFF the AC power.

(3) Tuner functions

- Preset channel call function
 - 1) Calls channels 1 to 9 (keys 1 to 9) and channel 10 (key 0) when the 10 key is not operated.
 - 2) Calls channels 11 to 19 (keys 1 to 9) and channel 20 (key 0) when the +10 key is operated once.
 - 3) Calls channels 21 to 29 (keys 1 to 9) and channel 30 (key 0) when the +10 key is operated two times and calls channels 31 to 39 (keys 1 to 9) and channel 40 (key 0) when the +10 key is operated three times.
 - 4) Shifts to the operation obtained when the +10 key is not operated if it is operated four times.

- S level hexadecimal data display function (E,T type)

With the selector on TUNER, when the "PTY" key on the main unit is operated, the frequency display ceases and the S level is displayed in hexadecimal while the key is pressed. When "LOUDNESS" is operated, the display is switched to restore the normal display.

- Mute signal output

No Selector MUTE (MUTE 1) control regulation is done whatever.

- RDS attenuator (E,T type)

With the selector on TUNER, when the "SP A" key on the main unit is operated, the SP A display is erased and ATT is on. If the "SP A" on the main unit is operated again after that, SP A is displayed and ATT is switched off. The SP A operation and ATT operation work together and are combined with switching the ATT display on and off.

* Under the ATT on/off relationship, ATT can not be entered in an AF search in test mode.

The ATT operation is done from ATT off.

If SP A was turned off with the selector on something other than TUNER, it will come on when TUNER is selected.

(4) AMP function

The original function of each key is executed when the SELECTOR mode is set to TUNER. The test mode operation is not performed in this case.

- Impedance 4/8 selection

No impedance 4/8 display appears in the normal state. Therefore, the SPEAKERS lamp of the fluorescent display indicator is turned ON and OFF in the test mode.

The SPEAKERS lamp is turned on when the impedance is 4. The SPEAKERS lamp is turned off when the impedance is 8.

- One touch max, mid, min setting for VOLUME

The variation of audio level and surround level can be operated by turning the Multi-Level up or down and, if the selector is on something other than TUNER, max, mid, min settings can be made with the number keys.

(1) Max is number key "3" : LEVEL 75

(2) Mid is number key "2" : LEVEL 7

(3) Min is number key "1" : LEVEL 0

- One touch settings for Audio Level Mode

The variation of audio level mode items can be set with respective keys and, if the selector is on something other than TUNER, direct settings can be made with the number keys.

(1) Balance is number key " 4 "

(2) Bass is number key " 5 "

(3) Treble is number key " 6 "

- MUTE signal output

Sets the analog muting to OFF at all times. No control is performed in this case. Sets the analog muting to ON in the same way as during normal operation when the front volume is set to the minimum value ($-\infty$ dB).

- MUTE Operation

Mute operation is toggled on and off by pressing the "AUTO/MANUAL" key.

KR-A2080/A3080/A4080/A5080

ADJUSTMENT

AM . Section : If alignment point is "-", Confirm the value.
If not, replace the front end pack.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list).  indicates safety critical components. For continued protection against risk of fire, replace only with same type and rating fuse(s). To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

The DC voltage is an actual reading measured with a high impedance type voltmeter as the AM/FM signal generator is specified to the conditions as shown in the list below. The measurement value may vary depending on the measuring instruments used or on the product. The value shown in () is actual reading measured in the AM mode.

MODE	CARRIER	MODULATION		ANT INPUT
		FREQUENCY	DEVIATION	
FM	98MHz	1kHz	STEREO 67.5kHz 7.5kHz(Pilot)	60dB
AM	1000(999)kHz	400Hz	MONO 30% MOD	60dB

KENWOOD follows a policy of continuous advancements in development. For this reason specifications may be changed without notice.

Note:

Component and circuitry are subject to modification to insure best operation under differing local conditions. This manual is based on Europe (E) standard, and provides information on regional circuit modification through use of alternate schematic diagrams, and information on regional component variations through use of parts list.

CONTROLS

1 REMOTE POWER key

Press to switch over the STANDBY/ON modes when the MAIN POWER is ON.

2 NUMERIC KEYS

3 STANDBY indicator

4 DSP LOGIC indicator

Lights when the DSP LOGIC mode is ON.

5 DSP indicator

Lights when the DSP presence mode is ON.

6 STEREO key

Press to cancel the surround modes.

7 DSP LOGIC key

8 DOLBY PRO LOGIC key

9 DOLBY 3 STEREO key

10 DSP key

11 INPUT SELECTOR Knob

Turn to select the input sources.

12 VOLUME CONTROL Knob

13 MAIN POWER switch

Press to switch the main power ON/OFF.

14 PHONES jack

Used for headphone listening.

15 SPEAKERS A/B keys

Press to select the A and/or B speaker systems.

16 AUTO key

Press for select the auto tuning mode.

17 DIRECT key

Press for direct station tuning based on numerical input.

18 MEMORY key

Press to preset a station in the memory.

19 TAPE 2(MONITOR) key

Press to monitor the sound being recorded.

20 LINE STRAIGHT key

Press to listen to a source with high quality sound.

21 LOUDNESS key

Press to enhance low frequencies.

22 LEVEL MODE (AUDIO, SURROUND) keys

AUDIO key :

Press when adjusting the tone.

SURROUND key :

Press when adjusting the surround modes.

23 MULTI LEVEL CONTROL key

Press to adjust the tone or surround mode setting.

24 TUNING keys

Press to tune broadcast stations.

25 CENTER MODE key

Press to select the center mode in the DOLBY PRO LOGIC surround mode.

26 BAND key

Press to switch the broadcast band.

STANDBY mode of REMOTE POWER key

When the power cord of this system is plugged in to a power outlet and the **MAIN POWER** switch is pressed to ON, the **STANDBY** indicator lights up regardless of the **REMOTE POWER** key setting. This indicates that a small amount of current is being supplied to the unit to back up the memory contents. This mode is referred to as the Standby mode. While the **STANDBY** indicator is lit, the power of the system can also be switched ON/OFF from the remote control unit.

KR-V7080/V8080

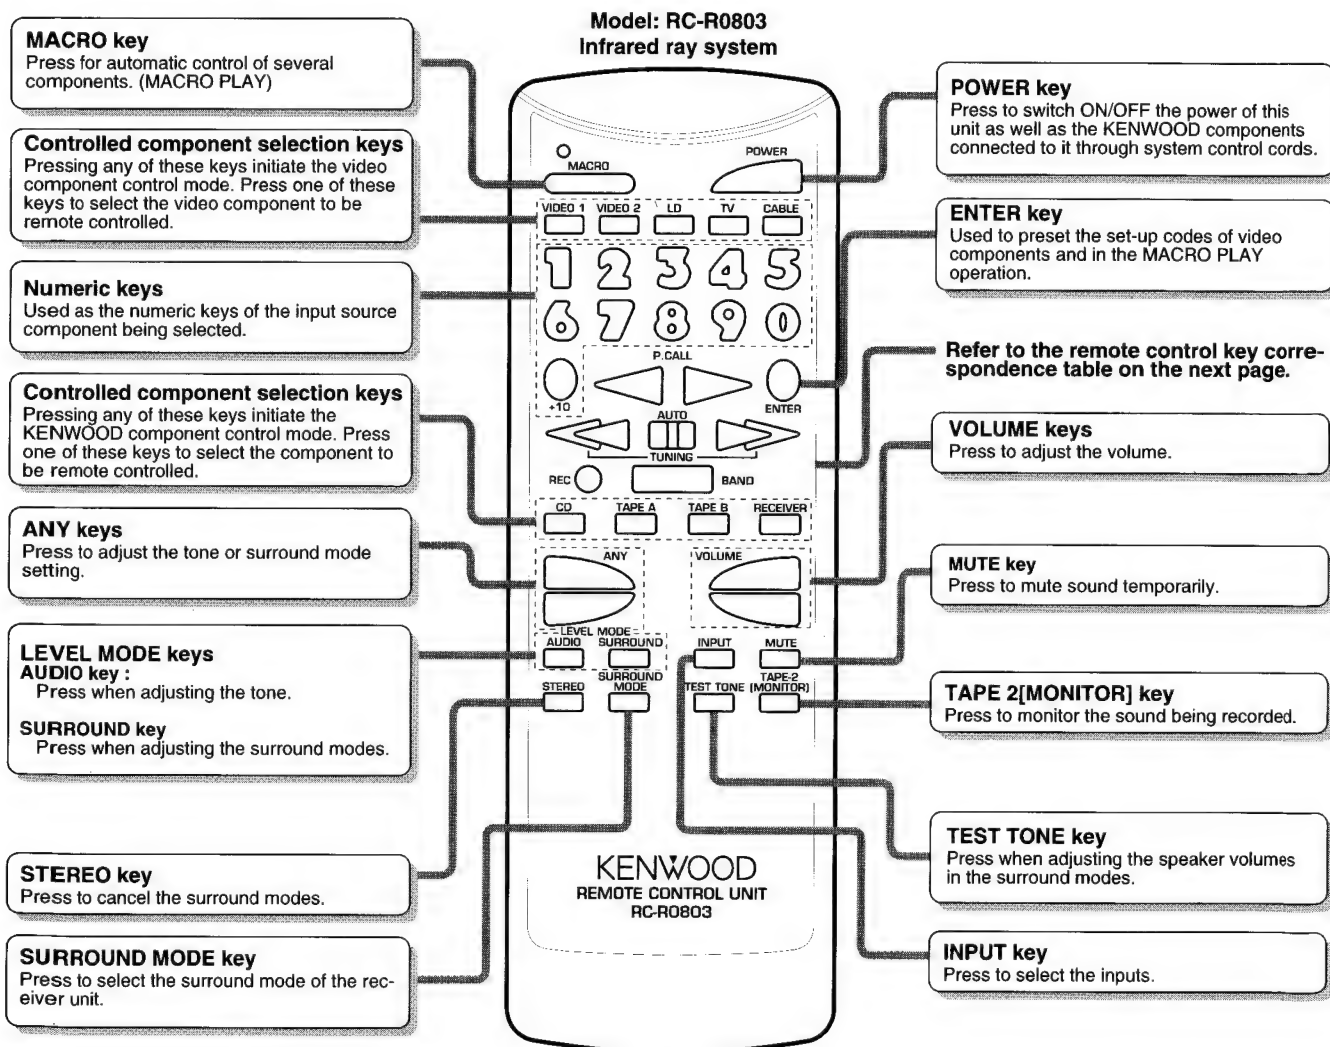

REMOTE CONTROL OPERATION

The remote control unit provided with unit functions in the following two modes so that it can be used to control other KENWOOD system components as well as video components from other manufacturers.

KENWOOD component control mode This mode is used to control the KENWOOD source components including cassette decks and a CD player. (The controlled components must be connected to this unit through system control cords.)

Video component control mode This mode allows to control the basic operations of video components from KENWOOD as well as other manufacturers.

Some of the keys act in different ways depending on the modes described above. Therefore, be sure to adjust the required mode before pressing these keys.

Loading batteries

① Remove the cover.

② Insert batteries.

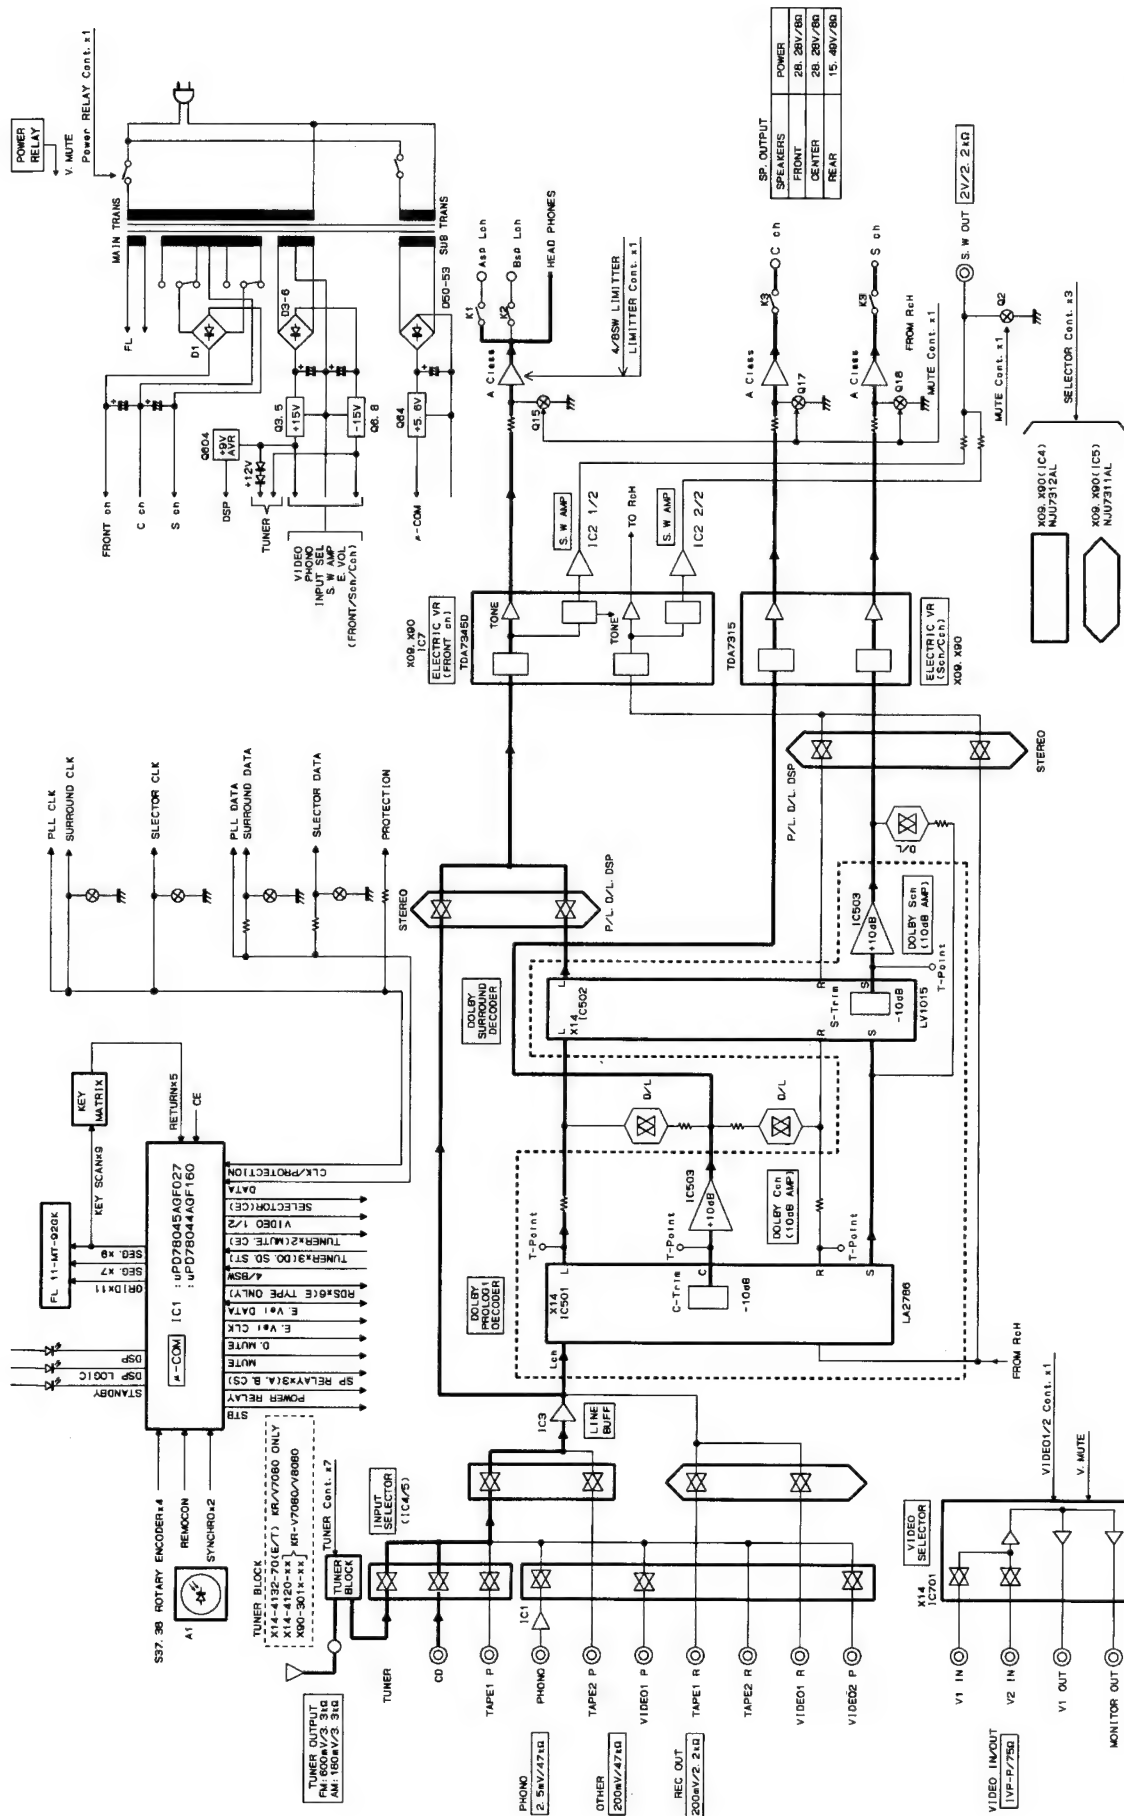

③ Close the cover.

• Insert two AA-size (R6 / SUM-3) batteries as indicated by the polarity marking.

KR-V7080/V8080

The initial setting is performed in a following event :

1. When backup memory data is destroyed when reset is applied to the microprocessor.
2. When the power cord is plugged in to the AC wall outlet while pressing the POWER key.

KR-V7080/V8080

CIRCUIT DESCRIPTION

2. BACKUP

This function holds the current state of the unit even if the AC power of the AV receiver is turned OFF.

(1) Operation outline

The backup state set command signal (CE) of a microcomputer is set low when the AC power is turned OFF. The microcomputer detects the signal and enters the stop state.

The microcomputer is reset when the AC power is turned ON. The data for backup state confirmation is checked by reset processing.

The microcomputer is initialized when the data was destroyed. If it is not destroyed, the microcomputer is started in the backup state.

- The data for backup state confirmation is written in a RAM area.
- The microcomputer is set to the STOP mode so as to save the power consumption.
- A backup state set command signal is detected by a timer interrupt of 1 msec.
- The backup guarantee period is set in a circuit.

(2) Backup state setting

- The data (A596H/5A69H) for backup state confirmation is written in a RAM area.
- Setting the special function port
Set the input/output port of a serial interface to the serial interface operation stop mode. Set the FIP controller to the display OFF mode.
- Setting the microcomputer's internal special function
Set all the interrupt enable flags to the disable state, respectively. Set the microcomputer to the STOP mode and stop the system clock oscillation of the microcomputer.

(3) Contents of backup data to be held

- POWER ON/OFF state
 - VOLUME LEVEL date
 - BALANCE LEVEL date
 - N.B.ON/OFF
 - SELECTOR SOURCE
- TUNER ———
- LAST BAND
 - RECEIVING STATION FREQUENCY data
 - PRESET MEMORY data (1ch~40ch)
 - AUTO/MANUAL mode

——— AMP ———

- POWER STANDBY ON/OFF
- SELECTOR SOURCE
- VIDEO OUT SOURCE
- TAPE2 MONITOR ON/OFF
- SPEAKER A RELAY ON/OFF
- SPEAKER B RELAY ON/OFF
- VOLUME LEVEL VALUE
- AUDIO ADJUST MODE
- BALANCE LEVEL VALUE
- BASS LEVEL
- TREBLE LEVEL
- SUB WOOFER LEVEL
- LINE STRAIGHT ON /OFF
- LOUDNESS ON/OFF

——— SURROUND ———

- SURROUND MODE
- DSP MODE
- DSP LOGIC MODE
- CENTER MODE
- SURROUND ADJUST MODE
- DELAY TIME
- CENTER LEVEL
- REAR LEVEL

3. PROTECTION

The protection state is entered when abnormality is detected during the POWER-ON sequence.

- The power and speaker are turned OFF when the abnormal state is detected during the POWER-ON sequence.
- The STANDBY LED blinks every 500 msec.
- The fluorescent display indicator goes OFF.

KR-V7080/V8080

CIRCUIT DESCRIPTION

4. DESTINATION LIST OF TUNER

Table 4-1 Destination List of Tuner

Destination	BAND	Receive frequency range	channel space	1F	PLL reference frequency	Destination DSW(X14-)		
						DSW2	DSW1	DSW0
						D31	D16	D29
K1	FM	87.5MHz~108.0MHz	100kHz	+10.7MHz	25kHz	0	0	0
	AM	530kHz~1700kHz	10kHz	+450kHz	10kHz			
K2	FM	87.5MHz~108.0MHz	100kHz	+10.7MHz	25kHz	0	0	1
	AM	530kHz~1610kHz	10kHz	+450kHz	10kHz			
E1	FM	87.5MHz~108.0MHz	50kHz	+10.7MHz	25kHz	0	1	1
	AM	531kHz~1602kHz	9kHz	+450kHz	9kHz			
E3 (RDS)	FM	87.5MHz~108.0MHz	50kHz	+10.7MHz	25kHz	1	0	1
	AM	531kHz~1602kHz	9kHz	+450kHz	9kHz			
M	KZ/E1 changes by only setting "DSW1". (DSW 1=0 : K2 Type, 1 : E1 Type)					0	X	1

DIODE SW(DSWX) : 0 = Without DIODE (When static, input LOW)

1 = With DIODE(When static, input HIGH)

X = TRANSISTOR SW (0 = OFF 1=ON)

※ ATTENTION

A SUB WOOFER output signal is output irrespective of SP selector switch (ASP and BSP) ON/OFF setting

The RDS PTY AF search always corresponds to a span search of 100kHz. Therefore, a span search of 50 kHz cannot be performed.

5. TEST MODE

5-1. TEST MODE OF MAIN UNIT

(1) Setting the test mode

The main unit is put into the test mode when the AC power is turned ON while pressing the "TUNING DOWN" key. The following state is obtained when the test mode of the main unit set.

- The power is turned ON automatically.
- All the fluorescent display indicators and LEDs light.
(The all-illuminated state is cleared by pressing any main unit key.)
- The backup state except when the power is turned ON and OFF is initialized.

(2) Canceling the test mode

Turn OFF the AC power.

(3) Tuner functions

- Preset channel call function
 - 1) Calls channels 1 to 9 (keys 1 to 9) and channel 10 (key 0) when the 10 key is not operated.
 - 2) Calls channels 11 to 19 (keys 1 to 9) and channel 20 (key 0) when the +10 key is operated once.
 - 3) Calls channels 21 to 29 (keys 1 to 9) and channel 30 (key 0) when the +10 key is operated two times and calls channels 31 to 39 (keys 1 to 9) and channel 40 (key 0) when the +10 key is operated three times.

4) Shifts to the operation obtained when the +10 key is not operated if it is operated four times.

- S level hexadecimal data display function
With the selector on TUNER, when the "DOLBY PRO LOGIC" key on the main unit is operated, the frequency display ceases and the S level is displayed in hexadecimal while the key is pressed.
When "3 STEREO" is operated, the display is switched to restore the normal display.
- Mute signal output
No Selector MUTE(MUTE 1) control regulation is done whatever.
- With the selector on TUNER, when the "SP A" key on the main unit is operated, the SP A display is erased and ATT is on. If the "SP A" on the main unit is operated again after that, SP A is displayed and ATT is switched OFF. The SP A operation and ATT operation work together and are combined with switching the ATT display ON and OFF.

※ Under the ATT ON/OFF relationship, ATT can not be entered in an AF search in test mode.

The ATT operation is done from ATT OFF.

If SP A was turned OFF with the selector on something other than TUNER, it will come on when TUNER is selected.

KR-V7080/V8080

CIRCUIT DESCRIPTION

(4) AMP function

The original function of each key is executed when the SELECTOR mode is set to TUNER. The test mode operation is not performed in this case.

- One touch max, mid, min setting for Audio Level and Surround Level

The variation of Audio Level and Surround Level can be operated by turning the Multi-Level UP or DOWN and, if the selector is on something other than TUNER, max, mid, min settings can be made with the number keys.

- 1) Max is number key "2"
- 2) Mid is number key "3"
- 3) Min is number key "1"
- 4) The Mid setting is as follows:

Master VOL. DELAY is the initial value

Balance is centered

BASS, TREBLE, SUB-WOOFER, CENTER and REAR are 0 dB or 0 step

Effect is 1 step

(5) EFFECT is 0 step for Min and 2 step for Max.

- One touch settings for Audio Level and Surround Level items

The variation of Audio Level and Surround Level items can be set with respective keys and, if the selector is on something other than TUNER, direct settings can be made with the number keys.

- 1) Balance is number key "4"
- 2) Bass is number key "5"
- 3) Treble is number key "6"
- 4) Sub-Woofer is number key "7"
- 5) Rear Level is number key "8"
- 6) Center Level is number key "9"
- 7) Delay Time is number key "0"
- 8) Effect Level is number key "+10"

- TEST TONE operation

Uses the "DIRECT" key instead of the "TEST TONE" key.

- MUTE signal output

Sets the analog muting to OFF at all times. No control is performed in this case. Sets the analog muting to ON in the same way as during normal operation when the front volume is set to the minimum value($-\infty$ dB).

- Impedance 4/8 selection

No impedance 4/8 display appears in the normal state. Therefore, the SPEAKERS lamp of the fluorescent display indicator is turned ON and OFF in the test mode. The SPEAKERS lamp is turned ON when the impedance is 4.

The SPEAKERS lamp is turned OFF when the impedance is 8.

- MUTE Operation

Mute operation is toggled ON and OFF by pressing the "AUTO/MANUAL" key.

5-2. SERIAL TEST MODE

(1) Setting the serial test mode

The unit is put into the serial test mode when a serial code "TEST ON" is input during the POWER-ON sequence.

In the 8-bit serial test mode, serial code 71H is input.

In the 16-bit serial test mode, serial code C27FH is input.

- In the serial test mode, all remote control keys and ordinary serial codes are disabled. Only the panel keys perform the same operation as usually.

(2) Canceling the serial test mode

- The serial test mode is canceled to return to the ordinary mode by inputting a "TEST OFF" code. After the ordinary mode was returned, the serial mode is returned to the state before the test mode is entered. The backup operation is not initialized.
- The serial test mode is also canceled when the AC power is turned OFF.

(3) Cautions

- The serial test code is prescribed as a 16-bit code only.
- The operations below are inhibited in the serial test mode.
 - Manual tuning UP/DOWN operation
 - UP/DOWN selection in PTY selection mode
 - AF search in ATT ON stateThe operations mentioned above cannot be guaranteed when they are performed in the serial test mode.
- An identical code is output when the serial test mode code is input.
- A TUNED ON/TUNED OFF code is only output.

(4) The serial test mode codes for ATT ON/OFF operate in the same way as for test mode with the main unit keys.

(SP A also goes ON/OFF as ATT goes on/off.)

- Under the ATT ON/OFF relationship, ATT can not be entered in an AF search in test mode. The ATT operation is done from ATT OFF. If SP A was turned OFF with the selector on something other than TUNER, it will come on when TUNER is selected.

KS6 (62)	PRO LOGIC	DSP LOGIC	STEREO	TUNING DOWN	MULTI UP
KS7 (61)	3 STEREO	DSP	BAND	TUNING UP	CENTER MODE
KS8 (60)	* 3 DSW0	* 3 DSW1	* 3 DSW2	* 2 DSW3	—

* 1 The destination is E3 type only. For another destination, there is no key. (RDS function)

* 2 Used for operation selector of 8- or 16- bit serial data.

* 3 Used for discrimination of the destination. (Refer to the Destination List of Tuner in Table 5-1.)

8. XS8/XL16 Function

Implements an additional operation by the system in order to shift a system operated by XS8 to SL16.

8-1. Addition of a selector source

Adding a system operation adds selector sources MD and LD and controls MD and LD system operation.

(1) Selector source switching

MD and LD are switched as TAPE1 and VIDEO2 background modes separately from the normal selector functions.

- Switch the selector source by holding down the AUTO panel key for at least two seconds.

TAPE1 -> MD

VIDEO2 -> LD

(If another key is entered while the key is being entered, the key input is set to off and the key is made ineffective.)

When a MD or LD is used, the MD is connected to the RCA Pin of TAPE1 and the LD to the RCA Pin/Video Input of VIDEO2.

- The operation of the system controls only the currently selected source and has no control whatsoever over the operation of the side which is not selected.

For example, while MD is selected, even if the "Deck B Play" serial code is received, MD will remain selected without switching from MD to TAPE1.

(2) Settings during microprocessor backup or initialization

- During microprocessor initialization the selector is set to TAPE1 and VIDEO2. The current selector mode (TAPE1/MD and VIDEO2/LD) is maintained except when the backup is disrupted.

(3) Other items be noted

- This selector switching function has been developed in accordance with new serial codes. Therefore, if XS8 is used, since there is no code for MD and LD, the selector

source function will not work if the 8/16-bit serial mode is 8-bit. It works only in 16-bit mode.

Also, if serial mode has been switched from 16-bit to 8-bit when MD and LD are being selected, it will force a switch to TAPE1 and VIDEO2.

8-2. Changeover preference order

- Pressing KEY, then turn on power.

- Backup data of ①.

- Diode matrix changeover.

8-3. XS8 / SL16 Selection

- KS8 and KR3 are used for the operation selection of 8- or 16- bit serial data. The 8- and 16- bit serial data are selected only during reset initialization.

Table 8-1 8-/16- bit Selection

Serial cord	DSW	DSW3
8- bit serial		0
16- bit serial		1

9. System operation of SL16

Easy operation one way amplifier and receiver. Other source devices are compatible with one-way and two-way easy operation. Operation is 16-bit.

Operation is two way and compatible with operating mode display. Also, adding MD and LD to input selector makes it compatible with easy operation. Apart from TUNER, source devices are operating mode display compatible and input selector MD and LD compatible. Since it is not possible for the amplifier and receiver to be always compatible with operating mode displays, they are only input selector MD and LD compatible and SL16 compatible.

CAUTION: For continued safety, replace safety critical components only with manufacturer's recommended parts (refer to parts list). Δ indicates safety critical components. For continued protection against risk of fire, replace only with same type and rating fuse(s). To reduce the risk of electric shock, leakage-current or resistance measurements shall be carried out (exposed parts are acceptably insulated from the supply circuit) before the appliance is returned to the customer.

The DC voltage is an actual reading measured with a high impedance type voltmeter as the AM/FM signal generator is specified to the conditions as shown in the list below. The measurement value may vary depending on the measuring instruments used or on the product. The value shown in () is actual reading measured in the AM mode.

MODE	CARRIER	MODULATION		ANT INPUT

SPECIFICATIONS

Audio section

Rated power output at the STEREO operation

100 watts per channel minimum RMS, both channels driven at 8 Ω , from 20 Hz to 20,000 Hz with no more than 0.06 % total harmonic distortion. (FTC)

Power output at the SURROUND operation

Front

100 watts per channel minimum RMS, both channels driven, at 8 Ω , 1 kHz with no more than 0.7 % total harmonic distortion. (FTC)

Center

100 watts minimum RMS at 8 Ω , 1 kHz with no more than 0.7 % total harmonic distortion. (FTC)

Rear

30 watts per channel minimum RMS, both channels driven, at 8 Ω , 1 kHz with no more than 0.7 % total harmonic distortion. (FTC)

Total harmonic distortion

.....0.01 % (1 kHz, 50 W, 8 Ω)

Signal to noise ratio (IHF'66)

PHONO (MM)75 dB

LINE (CD)95 dB

Input sensitivity / impedance

PHONO (MM)2.5 mV / 47 k Ω

CD, TAPE, VIDEO200 mV / 47 k Ω

Tone controls

BASS ± 8 dB (at 100 Hz)

TREBLE ± 8 dB (at 10 kHz)

LOUDNESS control at - 30 dB VOLUME level

.....+ 6 dB (100 Hz)

Output level / impedance

Sub woofer preout1.0 V / 2.2 k Ω

Video section

VIDEO inputs / outputs (Composite)1 Vp-p / 75 Ω

FM Tuner section

Tuning frequency range87.5 MHz ~ 108 MHz

Usable sensitivity

MONO1.2 μ V (75 Ω) / 13.2 dBf
(75 kHz dev., S/N 30 dB)

50 dB quieting sensitivity

STEREO32 μ V (75 Ω) / 41.2 dBf
(75 kHz dev.)

Total harmonic distortion (1 kHz)

MONO0.6 % (65.2 dBf input)

STEREO0.7 % (65.2 dBf input)

Signal to noise ratio (1 kHz 75 kHz dev.)

MONO75 dB (65.2 dBf input)

STEREO68 dB (65.2 dBf input)

Stereo separation

1 kHz40 dB

Selectivity (IHF ± 400 kHz)50 dB

Frequency response30 Hz ~ 15 kHz, + 0.5 dB, - 3.0 dB

AM Tuner section

Tuning frequency range530 kHz ~ 1,700 kHz

Usable sensitivity (30 % mod., S/N 20 dB)

.....12 μ V / (500 μ V / m)

Signal to noise ratio (30 % mod., 1 mV input)48 dB

Total harmonic distortion0.7 %

Selectivity30 dB

General

Power consumption4 A

AC outlet

SWITCHED2: (total 65 W, 0.54 A max.)

DimensionsW : 440 mm (17-5 / 16")

H : 148 mm (5-13 / 16")
